

## Create S3 bucket:

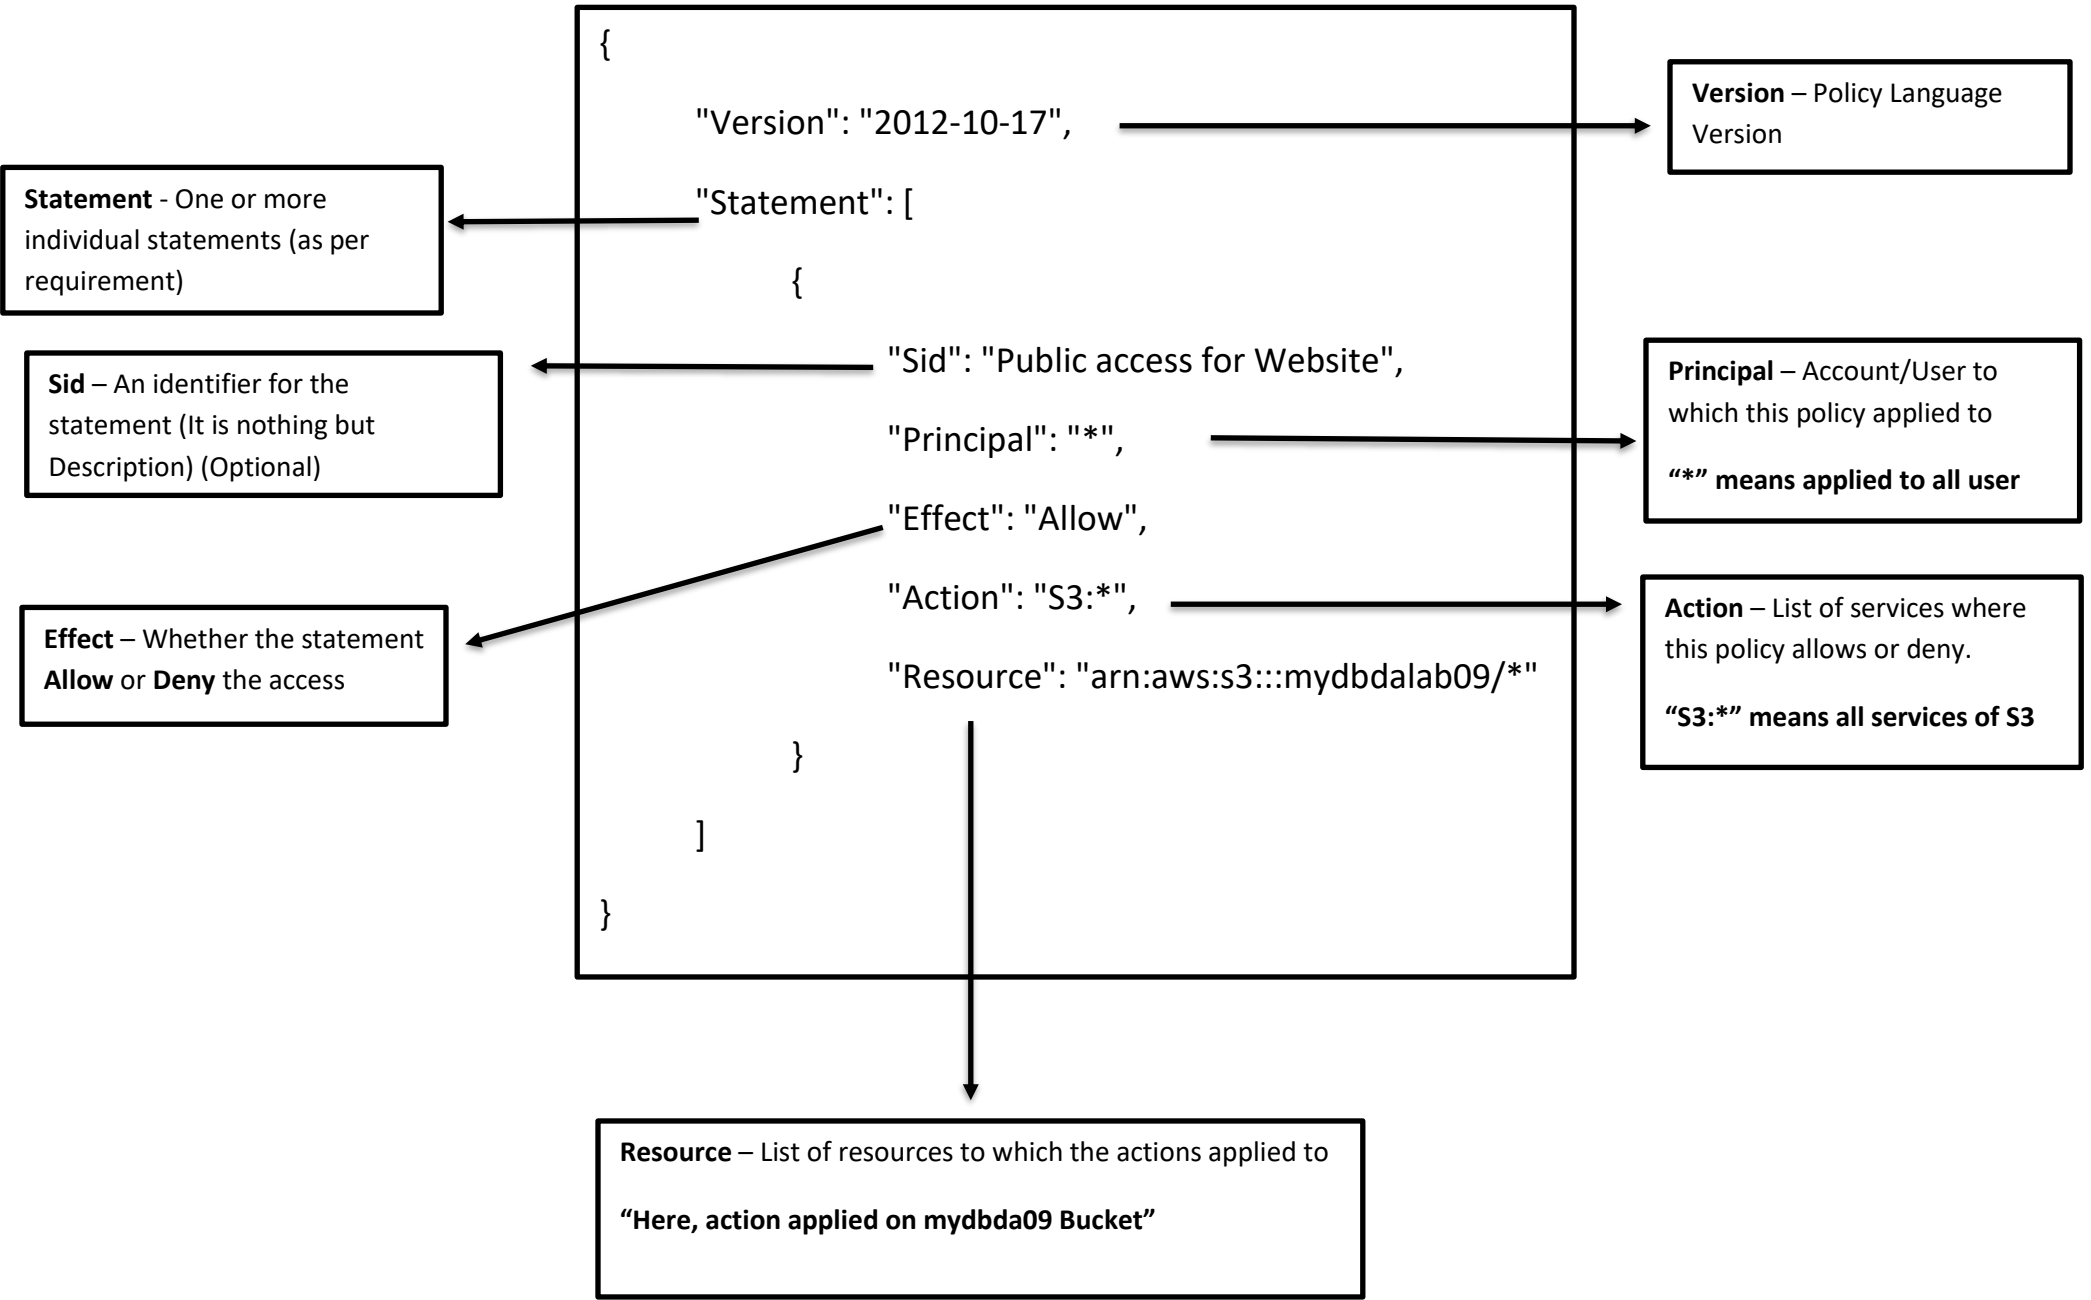

# How To access a website:

## Steps 1 =>

Go to Properties → Scroll down and Static Website hosting option is there then Click Edit → Select Enable → Select Host a static website → In Index document section mention **“index.html”** → Click on save changes

## Steps 2 =>

Go to Permissions of Bucket → Go to Bucket policy and Click on Edit → Click on Add a New Statement → And write following statements

After that Click on Save changes → Go to object and click on file i.e., index.html → Copy the Object URL → Open a new tab → Paste there → You can access your static website.
